[number.onkarsawarna.dev](https://number.onkarsawarna.dev) | [onkarsawarna.dev](https://onkarsawarna.dev)

## EDUCATION

**Birla Institute Of Technology, Mesra**  
*Integrated Masters Degree, Mathematics and Computing*

CGPA – 9.22  
2017 – 2022

## EXPERIENCE

### Acceldata

*Software Engineer*

March 2026 – Present

*Bangalore, Karnataka*

- Built VAST storage observability end to end and service discovery in the Go CLI
- Built the automated upgrade path ,idempotent migration steps across container configs and MongoDB, with backups so a failed upgrade can be safely re-run. Authored the customer-facing runbook.
- Unblocked a major enterprise customer by removing a hardcoded container-user assumption from the deployment CLI, then redesigned the agent deployer to be UID/GID-agnostic and database-driven.
- Extended the Filebeat → Logstash → Elasticsearch pipeline to cover previously unsearchable components across HDP and Cloudera.

### Menlo Security India

*Senior Engineer I*

October 2021 – February 2026

*April 2025 – February 2026*

- Engineered and maintained a high-performance, Go-based simulator for load and performance testing of traffic steering servers, leveraging goroutines and the Gin framework to simulate thousands of concurrent WireGuard tunnels, enhancing throughput and resiliency.

*Software Engineer*

*June 2022 – March 2025*

- Developed a scalable and resilient Go-based IP allocation and deallocation service for large-scale distributed systems, ensuring dynamic resource assignment and automated cleanup to optimize resource utilization.
- Led migration of services from AWS to GCP, adapting core services with GCP-specific modifications in Go and updating deployment configurations in Terraform for a seamless infrastructure transition.
- Built a Go (Cobra) CLI tooling solution to manage eBPF maps, improving operational efficiency and developer productivity across the engineering organization.
- Designed and implemented a custom token validation library in Go , shared tooling that reinforced secure access and authentication across multiple internal applications.
- Developed a session cleanup service using AWS Lambda and DynamoDB in Go, automating the removal of expired sessions for better session management.

## PROJECTS

**the number** | *Go, Docker* | [number.onkarsawarna.dev](https://number.onkarsawarna.dev) | [github.com/onkar-sawarna/the-number](https://github.com/onkar-sawarna/the-number)

- Shipped a containerised Go web service (Docker on Render) with HTTP handlers for 5 calculators : FIRE, SIP, EMI, emergency fund, and 50/30/20 in rupees and dollars.
- FIRE loop models Indian savings (NPS, EPF, PPF, SIPs, gold) to the year work could become optional, plus what-ifs (smaller SIP, pay cut, pause). ~20.6k HTTP requests since launch.

**onkarsawarna.dev** | *Go, Razorpay* | [onkarsawarna.dev](https://onkarsawarna.dev) | [github.com/onkar-sawarna/blog](https://github.com/onkar-sawarna/blog)

- Personal site where I write on systems, networking, and observability, with a small Go API for post likes.
- Integrated Razorpay for paid notes, checkout creates a payment link, the callback is verified, then the PDF is decrypted and streamed.

## TECHNICAL SKILLS

**Languages:** Golang, C/C++, Java

**System Design and Architecture:** HLD, LLD, Microservices, Scalability, Reliability, Performance Optimization

**Cloud and Infrastructure as Code:** AWS, GCP, Terraform, Jenkins

**Frameworks and Developer Tools:** Git, Docker, Wireshark, Linux, Echo

**Databases:** MySQL, DynamoDB, Elasticsearch, VictoriaMetrics

**Networking and Security:** eBPF, VPN, SSH, Firewall Configuration, IPsec Tunnels, WireGuard

**Observability and Monitoring:** Prometheus, Telegraf, Logstash, Filebeat, Grafana-style dashboards

**Big Data and Distributed Systems:** Hadoop (HDFS, YARN), Hive, HBase, Spark, Ozone, Impala, Kafka, Ambari
